

Assignment 6 (Project)

for NeuroComputing/ Theoretical Neuroscience 2013

This assignment is a little group project on supervised learning and using MLPs. In this project you should use a MLP on any data you find interesting (e.g. from the UCI Machine Learning repository at <http://archive.ics.uci.edu/ml/>) or your own data and discuss the performance or possible problems.

Your project report should take the form of a scientific paper (such as a conference submission) with a page limit of 4 pages. [A brief \(biased\) guide to writing scientific papers](#) is provided on our course wiki.

Send the paper to prof6508@cs.dal.ca with subject line A6 by Thursday, March 16, before 4pm.
